Portfolio
Mendoza-Argentina

Data Analyst with experience in dashboard development, ETL process automation, and KPI analysis for decision-making. Strong command of SQL, Power BI, Excel, and Python applied to real business data.
Experience working with functional areas to transform data into actionable insights, optimize processes, and improve data quality. Background in molecular biology with over 10 years of research experience, contributing analytical thinking, statistical rigor, and the ability to solve complex problems.

PROFESSIONAL EXPERIENCE

Data Scientist - DigPatho
March 2025 – September 2025

- Processing and structuring large volumes of biomedical data.
- Automating Python pipelines and automated reports.
- Developing internal tools to improve data efficiency and quality.
- Documenting workflows to ensure traceability and consistency.

Data Analyst - Guayerd/IBM
2024

- Design and automation of dashboards in Power BI and Looker Studio.
- Development of MySQL database for integrating multiple data sources.
- Implementation of ETL processes, ensuring data quality and availability.
- Definition and validation of financial and operational KPIs.
- Documentation of data models and key metrics.

Fullstack Developer - Personal Project
2022 - 2024

- Development of APIs and microservices in Java/Spring Boot.
- Integration and validation of data in transactional workflows.
- Automation of processes focused on operational efficiency.

Insurance Advisor - Obon Seguros
2019 - 2021

- Customer portfolio management and operational data analysis.
- Database maintenance and updates.
- Generation of internal reports and tracking metrics.

High School Teacher - Ministry of Education, Mendoza / San Luis, Argentina
2010 - 2019

- Design and monitoring of academic performance indicators.
- Analysis of educational outcomes and report preparation.

Research Fellow – Spain, Germany, Argentina

2003 – 2010

- Analysis of experimental data, statistical models, and technical documentation.
- Publication of results in international scientific journals.

DATA ANALYTICS & DATA SCIENCE PROJECTS

Oil & Gas Production and Economic Analysis

- Development of a Power BI dashboard for well production and profitability analysis.
- Application of Decline Curve Analysis (DCA) for production forecasting.
- Calculation of economic limits and abandonment date estimation.
- Analysis of key metrics: oil price, water cut, gas revenue.
- Documentation of workflows ensuring traceability and consistency.

Retail Sales & Customer Analytics (Hypermarkets)

- Analysis of retail sales and customer behavior.
- Identification of consumption patterns and seasonality.
- Development of dashboards with business KPIs (sales, volume, average sale).
- Generation of insights for optimizing sales strategies.

Credit Risk Modeling

- Development of classification models for credit risk prediction.
- Feature engineering on financial variables.
- Model training (Logistic Regression, Random Forest).
- Evaluation with metrics: AUC, precision, recall, F1 score.

CORE SKILLS

Data & BI

- Power BI, Looker Studio, Advanced Excel, SQL (MySQL, PostgreSQL), ETL, Data Modeling.

Programming & Automation

- Python (Pandas, NumPy, Scikit-learn), automation scripts, Git, Docker (basic).

Analysis

- Statistics (ANOVA, t-test), exploratory analysis, KPIs, forecasting.

Methodologies

- SCRUM, process documentation, continuous improvement.

EDUCATION

- Data Analysis - Guayerd/IBM (2024)
- Fullstack Developer - SoyHenry (2022)
- BSc in Molecular Biology - National University of San Luis (2006)

LANGUAGES

- BSc in Molecular Biology
- English: Intermediate.

PUBLICATIONS

- Harmine specifically inhibits protein kinase DYRK1A and interferes with neurite formation.
- Apoptotic photoreceptor loss and altered expression of lysosomal proteins in the nclf mouse model.
- Organ-specific changes in the expression of mannose-6-phosphate receptors during postnatal development.
