Portfolio
Mendoza-Argentina

Data Analyst with experience in dashboard development, ETL process automation, and KPI analysis for decision-making. Strong command of SQL, Power BI, Excel, and Python applied to real business data.
Experience working with functional areas to transform data into actionable insights, optimize processes, and improve data quality. Background in molecular biology with over 10 years of research experience, contributing analytical thinking, statistical rigor, and the ability to solve complex problems.

PROFESSIONAL EXPERIENCE

Data Scientist - DigPatho
March 2025 – September 2025

- Processing and structuring large volumes of biomedical data.
- Automating Python pipelines and automated reports.
- Developing internal tools to improve data efficiency and quality.
- Documenting workflows to ensure traceability and consistency.

Data Analyst - Guayerd/IBM
2024

- Design and automation of dashboards in Power BI and Looker Studio.
- Development of MySQL database for integrating multiple data sources.
- Implementation of ETL processes, ensuring data quality and availability.
- Definition and validation of financial and operational KPIs.
- Documentation of data models and key metrics.

Fullstack Developer - Personal Project
2022 - 2024

- Development of APIs and microservices in Java/Spring Boot.
- Integration and validation of data in transactional workflows.
- Automation of processes focused on operational efficiency.

Insurance Advisor - Obon Seguros
2019 - 2021

- Customer portfolio management and operational data analysis.
- Database maintenance and updates.
- Generation of internal reports and tracking metrics.

High School Teacher - Ministry of Education, Mendoza / San Luis, Argentina
2010 - 2019

- Design and monitoring of academic performance indicators.
- Analysis of educational outcomes and report preparation.

Research Fellow – Spain, Germany, Argentina
2003 - 2010

- Analysis of experimental data, statistical models, and technical documentation.
- Publication of results in international scientific journals.

DATA ANALYTICS & DATA SCIENCE PROJECTS

Oil Well Production & Economic Analysis (2026)

- Comprehensive analysis of oil well production using time series data (2013-2021).
- Implementation of Decline Curve Analysis (DCA) using exponential and hyperbolic models with automatic selection based on RMSE.
- Production forecasting and calculation of Estimated Ultimate Recovery (EUR).
- Evaluation of economic limits and estimation of well abandonment date.
- Revenue modeling based on projected production.
- Simulation of multiple wells for comparative analysis and performance ranking.
- Development of an interactive dashboard in Streamlit for scenario exploration.

Credit Risk Modeling & Default Prediction (2026)

- Development of a classification model for credit default prediction (UCI dataset, 30k records).
- Exploratory data analysis focused on payment behavior and key predictive variables.
- Behavioral feature engineering: delinquency frequency, severity, and payment patterns.
- Construction of aggregated variables (payment behavior, delay frequency, composite risk score).
- Model training and comparison (Logistic Regression vs Random Forest).
- Model evaluation using AUC, KS, and Gini metrics, including overfitting analysis.
- Model optimization through multicollinearity reduction (VIF) and feature selection.

Retail Sales & Customer Analytics (Superstore) (2025)

- End-to-end analysis of retail sales data with focus on commercial performance and customer behavior.
- Data processing and transformation in Python to generate an analytical dataset.
- Development of Power BI dashboards with key KPIs (sales, order, average order value, lead time).
- Analysis of geographic performance, logistics, and customer segmentation.
- Identification of business insights: seasonality, high-value customers, and purchasing patterns.

CORE SKILLS

Data & BI

- Power BI (DAX, Data Modeling), Looker Studio, Advanced Excel, SQL (MySQL, PostgreSQL), ETL.

Programming & Automation

- Python (Pandas, NumPy, Scikit-learn), automation scripts, Git, Docker (basic).

Analysis

- Statistics (ANOVA, t-test), exploratory analysis, KPIs, forecasting.

Machine Learning

- Supervised learning models (Logistic Regression, Random Forest), model evaluation (AUC, F1-score)

Methodologies

- SCRUM, process documentation, continuous improvement.

EDUCATION

- Fundamentals of Artificial Intelligence – Guayerd/IBM (2025)
- Fundamentals of Data Analytics - Guayerd/IBM (2024)
- Fullstack Web Developer - SoyHenry (2022)
- BSc in Molecular Biology - National University of San Luis (2006)

LANGUAGES

- English: Intermediate.

PUBLICATIONS

- Harmine specifically inhibits protein kinase DYRK1A and interferes with neurite formation.
- Apoptotic photoreceptor loss and altered expression of lysosomal proteins in the nclf mouse model.
- Organ-specific changes in the expression of mannose-6-phosphate receptors during postnatal development.
